SUMMARY

Software engineer with **3+ years building production web and mobile products**, frontend-first, across healthcare and marketplace apps. Built real-time messaging, multi-tenant, and AI features in React and React Native, and work across the stack with FastAPI, PostgreSQL, and AWS. Use Cursor and Claude Code daily, with team-wide agent rules and commands I wrote.

SKILLS

Languages: TypeScript, JavaScript, Python, SQL, HTML, CSS

Frontend: React, React Native, Next.js, Redux Toolkit (RTK Query), React Navigation, Material UI, WebSockets

Backend & Cloud: FastAPI, PostgreSQL, Supabase, REST APIs, AWS (ECS Fargate, RDS, ElastiCache, S3, CloudFront, SQS), Docker

AI / LLM: LLM APIs, RAG, embeddings, pgvector, structured outputs, prompt caching, model tiering

AI Tools: Cursor (agent mode, rules, slash commands), Claude Code (CLAUDE.md, custom commands), Figma MCP

Testing & Tools: Jest, Playwright, AWS Cognito, Firebase/FCM, Twilio, Git, CI release workflows

EXPERIENCE

Kindtech Pvt Ltd — Bengaluru, India - June, 2023 – Present

Frontend Engineer

- **Architected a config-driven React Native platform powering four marketplace verticals**, so each product launches from shared config, theming, and navigation, not separate screen trees. Owned the **React Native 0.74** and Gradle upgrades.
- **Owned major parts of a production telehealth messaging platform** built with **React 18 and Redux Toolkit**, including resilient WebSocket connectivity, pagination, unread state, reactions, mentions, threaded channel/DM navigation, Twilio video visits, and role-aware clinical forms.
- **Took the healthcare platform from a single VM to production on AWS:** ECS Fargate across two availability zones, RDS PostgreSQL Multi-AZ, ElastiCache, S3 + CloudFront, and SQS. Enforced **TLS certificate verification** in our database clients and tested recovery with forced failovers and backup restores.
- **Extended ownership beyond the frontend** by designing a **PostgreSQL schema and migration** for patient clinical data, building a **FastAPI global-search API** and its frontend, and implementing tools for an **LLM-powered clinical agent**.
- Built **white-label, multi-tenant infrastructure** (per-brand theming, workspace switching) and hardened an inherited app: fixed a **stored-XSS vulnerability**, removed **841 dead files (~60K lines)**, and replaced hardcoded secrets with signed-URL uploads.
- **Built the team's AI-assisted development workflow in Cursor:** 6 rule files and 7 slash commands that take a feature from request and Figma design to plan, code, review, and PR, with **human approval gates** and API-contract checks. A teammate used it to ship a new vertical in ~9 days.
- Reviewed and merged **88 pull requests from 10 engineers** and handled **29 staging-to-main release integrations**.

PROJECTS

Prep — AI-native Interview Preparation Platform

Next.js, TypeScript, Supabase, pgvector

- Built end-to-end with **Claude Code** (project CLAUDE.md, custom /phase command): **10 PostgreSQL tables, 7 authenticated API routes, 10 screens**, a deterministic spaced-repetition scheduler, and **362 automated tests** covering scheduling, AI failover, RAG grounding, and cross-user authorization.
- Designed a **provider-agnostic AI gateway**: product code requests capability tiers, not models, so providers change without touching call sites. Added per-user usage caps and fail-closed behavior on expensive model paths.
- **Built a citation system that prevents fabricated URLs** by having models cite indexed documents from a curated **202-document pgvector corpus**, with server-side validation resolving citations against known records.

DevLinks — Developer Bookmark Manager

React, TypeScript, Redux Toolkit, Supabase

- **Built an end-to-end bookmark platform** with GitHub OAuth, collections, metadata previews, faceted search, and public sharing, backed by **database-enforced URL normalization, deduplication, and full-text search**.
- **Implemented a deterministic 84-rule resource classifier** and hardened metadata fetching against **SSRF** by resolving hostnames and rejecting private network ranges across redirect hops.

EDUCATION

Presidency University, Bengaluru 2019 – 2023

Bachelor of Technology - CSE | CGPA: [8.2/10]
